

Composite Blinds Green Info Sheet

Green Properties of Composite Blinds

- Composite Blinds block the sun's heat, preventing solar heat gain in the summer and reducing heat loss in the winter by creating an insulating buffer between your home and the outdoors. This insulating effect reduces energy consumption and lowers energy bills.
- By blocking out the sun's UV rays, Composite Blinds also prevent damage to furniture, flooring and belongings.
- Composite Blinds carry a limited-lifetime warranty. These blinds are designed, engineered and tested for long life, reducing landfill waste from short-lived products.

Eco-Friendly Raw Materials

- The steel headrail and plastic components are 100% recyclable. Plastic components in Composite Blinds contain up to 50% pre-consumer recycled material.
- Corrugated cardboard is used to package all products and is 100% recyclable. The cardboard itself contains 35-40% recycled content. The angle board used to reinforce the cardboard is 100% recyclable and contains 80% post-consumer recycled material and 20% pre-consumer recycled material. Poly tubes, EPS pads, parts tub and bubble wrap used in packaging are also 100% recyclable.
- Custom box-cutting machines are used to cut each box to the exact size of the blind. This process eliminates wasted cardboard and packing materials and minimizes shipping energy.

Green by Nature is Springs Window Fashions' commitment to the environment.
