

# Graber® Vinyl Horizontal Blinds Green Info Sheet

## Specific Green Product Properties

- Vinyl Horizontal Blinds block the sun’s heat, preventing solar heat gain in the summer, and reducing heat loss in the winter by creating an insulating buffer between you and the outdoors. This insulating effect reduces energy consumption and lowers energy bills.
- By blocking out the sun’s UV rays, Vinyl Horizontal Blinds also prevent damage to furniture, flooring, and belongings thereby protecting the durability of your home and reducing prematurely sending damaged products to a landfill.
- Vinyl Horizontal Blinds carry a limited lifetime warranty. These blinds are designed, engineered and tested to ensure a long life, reducing landfill waste from short lived products.

## Specific Green Product Materials

- Vinyl Horizontal Blinds are made with 15% industry recycled material. Valances are made with up to 91% industry recycled material.
- The aluminum headrail and plastic components are 100% recyclable. Plastic components in Vinyl Horizontal Blinds contain up to 50% pre-consumer recycled material.
- Corrugated cardboard is used to package all products and is 100% recyclable. The cardboard itself contains 35-40% recycled content. The angle board used to reinforce the cardboard is 100% recyclable and contains 80% post-consumer recycled material and 20% pre-consumer recycled material. Poly tubes, EPS pads, parts tub and bubble wrap used in packaging are also 100% recyclable.
- Custom box cutting machines are used to cut each box to the exact size of the blind. This process eliminates wasted cardboard, packing materials and shipping energy.
